YU-CHENG WU

Yu-Cheng Wu | peteycwu@gmail.com | peterwu-1031 | peteycwu

EDUCATION

Dept. of Electrical Engineering, National Taiwan University (NTU) — **Taipei, Taiwan**
Bachelor of Science in Engineering — *Sep. 2019 – Jun. 2023*

- **Last 60 credit GPA: 4.19/4.3 (3.99/4.0)**, CGPA: 3.99/4.3 (3.87/4.0). [full transcript]
- Courses with Grades of A(+): Algorithms, Data Structure, Operating Systems, *Machine Learning, *Deep Learning for Computer Vision, Computer Architecture, Computer Programming Lab, Integrated Circuit Design, Intro. to Electronic Design Automation, Digital Circuit Lab, Communication System Lab, Linear Algebra, Calculus, etc. (* for graduate-level courses.)
- TOEFL: 110 (R30, L30, W27, S23)

PAPERS

- **Yu-Cheng Wu**, I-Ching Tseng, and Chung-Wei Lin, "Deep-Reinforcement-Learning-Based Design Space Exploration for Time-Sensitive Networking," ACM/IEEE Design Automation Conference **(DAC)**, 2024. (Submitted.)
- I-Ching Tseng, **Yu-Cheng Wu**, Hsuan Ling, and Chung-Wei Lin, "A Contract-Based Distributed Task-Offloading Methodology for Vehicular Edge Computing," ACM/IEEE International Conference on Cyber-Physical Systems **(ICCPS)**, 2024. (Submitted.)
- **Yu-Cheng Wu**, Chi-Tse Huang, and An-Yeu Wu, "DEA-NIMC: Dynamic Energy-Aware Policy for Near/In-Memory Computing Hybrid Architecture," IEEE International System-on-Chip Conference **(SOCC)**, 2023.

RESEARCH EXPERIENCE

Cyber-Physical Systems Lab, National Taiwan University — **Taipei, Taiwan**
Advisor: Prof. Chung-Wei Lin | *Research Assistant, Undergraduate Researcher* — *Sep. 2022 – Aug. 2023*

- Automated design space exploration for Cyber-Physical Systems (CPSs) complying with Time-Sensitive Networking (TSN) by Graph Neural Networks and Deep Reinforcement Learning.
- **Collected at least 3.93X more solutions than any other comparative method** for schedulable data flow periods and proposed a more efficient design flow for TSN-based CPSs.

Access IC Lab, National Taiwan University — **Taipei, Taiwan**
Advisor: Prof. An-Yeu Wu (IEEE Fellow) | *Undergraduate Researcher* — *Sep. 2021 – Aug. 2023*

- **Won 2022 NSTC Research Grant for University Students**, the largest research grant for undergraduates in Taiwan.
- **Outperformed prior works in accuracy by 8.8% and 4.6% on the CIFAR-10 and CIFAR-100 datasets** within the same energy consumption on hybrid accelerators based on In-Memory and Near-Memory Computing (IMC/NMC).
- Proposed a data-level and energy-aware policy using Deep Reinforcement Learning to dynamically adjust IMC and NMC usage in deep learning inference for image classification.

Applied Logic and Computation Lab, National Taiwan University — **Taipei, Taiwan**
Advisor: Prof. Jie-Hong Jiang | *Undergraduate Researcher* — *Sep. 2020 – Aug. 2022*

- **Enhanced 1.3% accuracy** of a Convolutional Neural Network (CNN) with bottleneck layers on the CIFAR-100 dataset by integrating the training technique of Autoencoders.
- Designed bitstream-only circuits integrating addition with activation for Stochastic Neural Networks.

WORK EXPERIENCE

Conformal ECO Team, Cadence — **Hsinchu City, Taiwan**
Intern Software Engineer — *Jul. 2022 – Aug. 2022*

- Optimized the Conformal ECO Designer, which enables RTL engineering change orders for pre-mask and post-mask designs.
- **Accelerated circuit error rectification by up to 32.3 times and reduced patch circuit sizes by up to 59.7%** by preliminarily fixing primary outputs with sparse error patterns.
- Implemented error pattern collection and patch circuit generation for circuits with limited error patterns based on the widely used open-source tool ABC.

PROJECTS

- **Talking to Me, Ego4D Challenge for CVPR Workshop 2023**
  Used CNN, Video Vision Transformers, HuBERT, and Mel-scale Frequency Cepstral Coefficients for video and audio data processing to identify whether a specific person is talking to the camera wearer.
- **Neural Network Synthesis**
  Implemented a neural network synthesis algorithm hardwiring weights into combinational circuits for a CNN optimized with quantization-aware training and knowledge distillation on the MNIST dataset.
- **Digital Circuit Design**
  Implemented audio recording and playing, an RSA256 decoder, Smith-Waterman Algorithm for short-read mapping, a random number generator, and the Red Light, Green Light game in "Squid Game" with a motion detector on the Altera DE2-115 FPGA.
- **RISC-V CPU**
  Implemented a RISC-V CPU supporting 12 single-cycle instructions and 32-bit multiplication.

EXTRACURRICULAR ACTIVITY

- **Captain, NTU Varsity Male Badminton Team:** Led the team to the 2021 National Intercollegiate Athletic Games semi-finals.
